

'Non-surgical anti-ageing treatments are highly sought after by patients who want to combat the effects of ageing without going under the knife. The most effective, popular, and safest of these treatments are Absorbable Thread Lifts, Thermage CPT and Fraxel Repair CO2 Laser. The benefits of different non-surgical facial treatments, when used singularly or in combination, can have a dramatic effect on the appearance of the skin, without the downtime associated with more invasive risky procedures', says **Dr Buddy Beani**.

Most people want to turn back the clock and restore tighter skin, facial lifting, and a more youthful-looking complexion - but don't want to commit to surgery. When used in tandem, these procedures can produce outstanding synergistic results.

THREAD LIFTS

The new Absorbable Thread Lift Facelifts are a minimally invasive non-surgical procedure for facelifts and redefining the ageing facial contours. Unlike facelift surgery, Thread Lifts have minimal downtime & bruising, no scarring and results appear natural.

Thread Lifting is a simple in-clinic 30-60 minute procedure performed under local anesthetic. Results begin immediately & continue to improve with time. The Threads have tiny barbs that gently anchor sagging skin into the desired uplifted position. These threads are absorbable, meaning that once placed in position, they gradually dissolve. Concomitantly the threads create collagen forming supportive scaffolding to sagging skin with results lasting up to 5 years.

The Absorbable Threads can deliver the following results:

- Face Lifts – Eyebrow, Midface, Jowl, Chin, Neck
- Wrinkles & Folds reduction, plus skin laxity tightening

FRAXEL CO2 FRACTIONAL LASER

Fraxel Repair CO2 Laser is a revolutionary new ablative fractional technology offering both Skin Contracting & Rejuvenation. Fraxel CO2 Laser is an excellent option for patients that are seeking combinational outcomes such as skin tightening, improving deep lines, smokers lines, deep scars, pigment and severely sun-damaged skin. Most patients require only 1-2 treatments and downtime is usually several days.

THERMAGE CPT

The new Thermage CPT is a patented non-surgical Facelift & Skin Tightening procedure involving the use of monopolar radiofrequency. Thermage CPT is the only proven technology that can effectively reach all skin layers to stimulate the production of your own natural collagen resulting in skin tightening. Results begin immediately after treatment and continue to improve with time. The results last for up to 3-5 years in most individuals. There have been over 1 Million Thermage treatments performed with a 94% success rate (ASLMS study 2005). The advantages of this true "lunch-time" procedure, when performed by qualified doctors, is that there is no downtime, anesthesia, or risk of infection.

Thermage CPT is suitable for the following body areas:

- Face Lifting, Neck Lifting, Jowl & Chin Tightening
- Brow Lifting & Hooding Reduction
- Tummy Tucks & Skin Tightening of arms, hands, buttocks

THREAD LIFTS

THERMAGE CPT

These treatments are available only at Specialised Cosmetic Medical Clinics, and treatments are performed by skilled cosmetic physicians. As a specialty, MD Cosmedical Solutions has safely and successfully performed over 7,000 non-surgical facelifts. These non-invasive treatments offer an effective and the safest solution to improving the appearance of the skin and to postpone or even negate the need for surgery.
